Lab 4 - Vibe Coding: Chat History

Affan Dumba | PES1UG24CS280 | Section E | LLM: Claude (Claude Code). Summary of the prompts and responses; tool output omitted.

User

Here is the Lab 4 handout (Lab_4_VibeCoding_Student_handout.pdf) and the assigned repo: https://github.com/SETAPESU26/34_pacman. Please complete the lab as per the manual: fix the bug, implement the listed features, and produce before/after videos.

Claude

Read the handout and the repo README. The task is to fix one deliberate bug and implement three empty hooks (ghost_color, on_pellet_eaten, bonus_life_threshold), record before/after videos, and submit the code, videos and chat history without raising a PR to the original repo.

Root cause of the bug: eat() compares the cell with "O", but the maze marks power pellets with lowercase "o", so frightened mode never starts.

Claude

Saved the starter code as original_code/game_original.py, then:
- Task 1: changed the comparison in eat() to "o".
- Task 2: ghost_color returns a distinct frightened tint per ghost and None otherwise.
- Task 3: on_pellet_eaten spawns a bonus fruit (+100) when 30 pellets are left and flashes the HUD on the last pellet; state is cleared in reset().
- Task 4: bonus_life_threshold returns 1000 (the maze has 130 pellets, so 10000 would be unreachable).

Verified: eating a power pellet sets fright_left to 3.0 and reverses every ghost.

User

I opened GitHub in Firefox. My repo gift-card-loyalty-exchange holds all SE labs, and ma'am asked for a single repo for all assignments. Please check it.

Claude

Inspected the repository: it uses SELABS/LabN folders with file names ending in _Affan_Dumba_PES1UG24CS280 and a README table per lab. Plan: add Lab 4 in the same structure.

User

Before adding, have you completed everything I asked for?

Claude

Status: the bug fix, three features and tests were done. Remaining: real window recordings (the first clips were simulated), the chat history, and the push.

User

Complete everything strictly according to the manual, with no mistakes.

Claude

Recorded the before, after and features videos from the real game.py window and checked the frames: before shows no frightened mode; after shows a different frightened colour per ghost, an extra life at 1000 points, the bonus fruit and the win screen. Added SELABS/Lab4 to the unified repo, updated the README, and pushed to main.
