Lab 4 - Vibe Coding: Chat History

Affan Dumba | PES1UG24CS280 | Section E | LLM: Claude (Claude Code). Condensed transcript of the session; tool output omitted.

User

Lab_4_VibeCoding_Student_handout.pdf + https://github.com/SETAPESU26/34_pacman

I want you to do this work for me. Finish the entire work with full perfection, no mistakes / misplacements / missing stuff. I have given you the repo and all inputs. I also want a video of how it works with the bugs and without the bugs. I can give you extensions if needed. Humanise things where needed like a CSE student would. Show progress in short intervals.

Claude

Read the handout (Lab 4: fix the broken code, add features from the README, record ~10 s before and after videos, push to personal repo, no PR to SETAPESU26, include chat history). Cloned the repo and read README.md and game.py. README: one deliberate bug (power pellet) and three empty hooks: ghost_color, on_pellet_eaten, bonus_life_threshold.

Found the bug: eat() checks MAZE[r][c] == "O" but the maze uses lowercase "o", so frightened mode never starts.

Claude

Saved the original as original_code/game_original.py, then fixed the comparison to "o" and implemented:
- ghost_color: per-ghost frightened tints (blinky magenta, pinky violet, inky green, clyde yellow), None otherwise.
- on_pellet_eaten: cherry spawns at 30 pellets left (+100 points), HUD flashes red on the last pellet; state kept in a BONUS dict cleared in reset().
- bonus_life_threshold: returns 1000 (130 pellets in the maze, so 10000 would be unreachable).

Tested eat() on a power pellet: fright_left = 3.0 and all ghosts reversed.

Claude

Built a recorder and produced before/after clips; checked frames. The first version rendered frames offscreen with an autopilot. Summarised the work, noting the chat export and push were still pending.

Claude

Explained that the lab repo does not exist on the account yet and needs to be created, since there is no gh CLI / token available.

User

I have opened github in firefox, there is a repo called gift card something that has all SE subject assignments and labs. Ma'am asked us to make one single repo for all the assignments. Check it

out.

Claude

Inspected affandumba/gift-card-loyalty-exchange: it uses SELABS/LabN/ folders and file names ending in _Affan_Dumba_PES1UG24CS280, with a README table per lab. Plan: add SELABS/Lab4 in the same style and update the README.

User

Wait, before adding, have you completed all the stuff that I asked you to do?

Claude

Honest status: bug and 3 features done and tested; but chat history export, real (non-simulated) window recording, push, interim progress updates and humanising were not fully done.

User

Complete everything strictly according to the manual with full perfection, without any mistakes and imperfections. I need it professionally solid.

Claude

Wrote play_and_record.py: runs the real game.py window, an autopilot posts genuine pygame arrow-key events, ffmpeg gdigrab captures the window (made DPI-aware to fix a scaling crop). Recorded before (10 s), after (10 s) and features (14 s) clips from the real window and checked frames: before shows no frightened mode; after shows the four tints, lives 3->4 at 1000 points, cherry and the win screen. Assembled SELABS/Lab4 in the unified repo, updated README, wrote notes and this chat history.
